

NeuroShell Trader

The RSI Bands indicator described by Francois Bertrand can be easily implemented in the NeuroShell Trader using the NeuroShell Trader's ability to program functions in standard languages such as C, C++, Power Basic or Delphi. You can create the RSI Band indicator by moving the AmiBroker code given in the article, which has the same syntax as the C programming language, to your preferred compiler and creating the corresponding function. You can insert the resulting indicator as follows:

1. Select 'New Indicator ...' from the 'Insert' menu.
2. Choose the **RSI Bands** indicator category.
3. Select the **RSI Bands** indicators.
4. Select the **Finished** button.

Users of NeuroShell Trader can go to the STOCKS & COMMODITIES section of the NeuroShell Trader free technical support website to download a copy of any of the Traders' Tips.
