

NeuroShell Trader

The John Ehlers' Ehlers Loops values can be easily computed in the NeuroShell Trader using the NeuroShell Trader's ability to call external Dynamic Linked Libraries. Dynamic Linked Libraries can be written in C, C++ and Power Basic.

After moving the code given in the article to your preferred compiler and creating a DLL, you can insert the resulting indicator as follows:

1. Select '**New Indicator ...**' from the '**Insert**' menu.
2. Choose the **External Program & Library Calls** category.
3. Select the appropriate **External DLL Call** indicator.
4. Setup the parameters to match your dll.
5. Select the **Finished** button.

Once the values for Price and Volume are on the chart, simply use the NeuroShell Trader export feature to export the values to an Excel Spreadsheet as described in the article. Users of NeuroShell Trader can go to the STOCKS & COMMODITIES section of the NeuroShell Trader free technical support Website to download a copy of any of the traders' tips.
