

## NeuroShell Trader

The Wide Bandpass and Voss Predictive Filters in John Ehlers' article can be easily implemented in the NeuroShell Trader using the NeuroShell Trader's ability to call external Dynamic Linked Libraries. Dynamic Linked Libraries can be written in C, C++ and Power Basic.

After moving the EasyLanguage code given in the article to your preferred compiler and creating a DLL, you can insert the resulting indicators as follows:

1. Select '**New Indicator ...**' from the '**Insert**' menu.
2. Choose the **External Program & Library Calls** category.
3. Select the appropriate **External DLL Call** indicator.
4. Setup the parameters to match your DLL.
5. Select the **Finished** button.

Users of NeuroShell Trader can go to the STOCKS & COMMODITIES section of the NeuroShell Trader free technical support website to download a copy of any of the traders' tips.
