NeuroShell Trader

Ron Black's Swing Line technique can be created in a standard programming language such as C, C++, Power Basic or Delphi.   Convert the EasyLanguage® programming code given in the article to the standard programming language of your choice and then insert the compiled result into your NeuroShell Trader chart by doing the following:

1. Select '**New Indicator …**' from the '**Insert**' menu.
2. Choose the **External Program & Library Calls** category.
3. Select the appropriate **External DLL Call** indicator.
4. Setup the parameters to match your DLL.
5. Select the **Finished** button.

Users of NeuroShell Trader can go to the STOCKS & COMMODITIES section of the NeuroShell Trader free technical support Website to download a copy of any of the traders' tips.
