

NeuroShell Trader

Autocorrelation Periodogram indicator described in John Ehlers' article can be easily implemented in the NeuroShell Trader using the NeuroShell Trader's ability to call external Dynamic Linked Libraries. Dynamic Linked Libraries can be written in C, C++, Power Basic or Delphi.

After moving the easy language code given in the article to your preferred compiler and creating a DLL, you can insert the resulting indicators as follows:

1. Select '**New Indicator ...**' from the '**Insert**' menu.
2. Choose the **External Program & Library Calls** category.
3. Select the appropriate **External DLL Call** indicator.
4. Setup the parameters to match your dll.
5. Select the **Finished** button.

Similar filter and cycle based strategies can also be created using indicators found in John Ehlers' Cybernetic and MESA91 NeuroShell Trader Add-ons. Users of NeuroShell Trader can go to the STOCKS & COMMODITIES section of the NeuroShell Trader free technical support Website to download a copy of any of the traders' tips.
